

# Bio Boost Biological Septic Tank Additive

## Features & benefits

One of the most effective septic tank additives available, Bio Boost biologically degrades organic matter to naturally remove crusting and unpleasant odours.

Bio Boost's powerful, long lasting biological formula works in harmony with the tank's natural bacteria to prevent blockages forming – helping to minimise odours and to reduce costly system failures. Containing a specially selected blend of safe to use bacteria, Bio Boost provides long-term odour control caused by incomplete digestion of some volatile fatty acids.

- Powerful & effective
- Long lasting action
- Environmentally friendly
- Hazard label free

## How to use

- Shake well before use.
- For the first fill or immediately after tank cleaning or emptying, apply 150ml daily for 3 days directly to the toilet bowl and flush.
- Maintain on a weekly basis by applying 150 mls of Bio Boost to the toilet bowl (application based upon a family of 4).

## Pack sizes

| Description        | Case size         | Order code  |
|--------------------|-------------------|-------------|
| 1 Litre Bottle     | Case of 12        | BIO-BST-1L  |
| 5 Litre container  | Case of 2         | BIO-BST-5L2 |
| 5 Litre container  | Case of 4         | BIO-BST-5L4 |
| 20 Litre container | Sold individually | BIO-BST-20L |

## Note

For best results, do not use with bleach, strong acids, caustic alkaline based products or disinfectants when using Bio Boost: these will neutralise the bacteria and affect its biological performance. We recommend the use of our biological surface cleaner Bio Clean and biological toilet bowl cleaner Bio TCD to complement Bio Boost.
